SUMMARY

Software Engineering student focused on robotics and computer vision, with production full-stack experience.

EDUCATION

McGill University | B.Eng. Software Engineering

Aug 2024 – Apr 2029

Wadad Stamboulie Entrance Award | GPA: 3.77/4.0

SKILLS

Languages: Java, Python, C, C++, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks: React, Next.js, Flask, YOLO, JUnit, Tailwind CSS, Headless CMS

Technologies: AWS (EC2, S3), Linux, Git, GitHub Actions, Arduino

Libraries & Concepts: OpenCV, NumPy, REST APIs, CI/CD, Agile/Scrum, UML, BDD/Gherkin

EXPERIENCE

Xsolla | Software Engineer Intern

Aug 2026 – Present

- Build internal applications and integrations on top of APIs and SDKs
- Ship production applications with React, Neo4j, and PostgreSQL used by hundreds of employees

McGill University: Desautels | Web Systems Assistant (Part-Time)

May 2026 – Present

- Refactor legacy web pages to HTML and WCAG standards to ensure cross-browser compatibility and accessibility
- Map 100+ URLs and metadata using Excel while documenting migration workflows and technical requirements

Save the Shea Tree | Full-Stack Engineer (Freelance)

June 2026 – Aug 2026

- Engineer a responsive web application for a non-profit using Next.js and Vercel to scale organization's digital presence
- Configure Headless Sanity CMS to allow non-technical staff to manage and update content independently

McGill Aerial Design | Computer Vision Engineer (Student Team)

Sept 2025 – May 2026

- Developed and trained a YOLOv8-based computer vision model in Python for autonomous target detection
- Improved detection reliability by tuning confidence thresholds and retraining on low-light/occlusion samples

Anchor Repair Co. | Software Engineering Intern

May 2025 – Aug 2025

- Developed a full-stack web application using Flask, SQL, and React to digitize client and service record management
- Deployed application on AWS (EC2, S3) and configured CI/CD pipelines using GitHub Actions for automated updates
- Redesigned front-end UI, reducing page load times by ~30%

Books Galore | Front-End Developer (Contract)

May 2025 – Dec 2025

- Re-architected e-commerce platform from a WordPress/PHP monolith to a headless stack (Next.js, Vercel, Sanity CMS), improving security, performance, and maintainability
- Built an API integrating Google Books and Open Library data to automate product creation, metadata extraction, and pricing, saving an estimated 500 hours of manual work
- Developed product browsing and checkout components, including overdraft/oversell protection at checkout

City Of Brampton | Software Engineering Instructor

Sept 2023 – Aug 2024

- Led 5+ STEM courses (Full-Stack Dev, Python, Robotics) for 100+ students, mentoring 30+ individual projects

PROJECTS

CV Robotic Control System | [GitHub](#)

Dec 2025 – Present

- Develop a Python-based control system integrating YOLO and OpenCV-based object detection with Arduino motor control
- Establish serial communication between Python and C++, extending to ROS 2 for modular node-based communication
- Design and implement a finite state machine (FSM) to coordinate perception, decision-making, and actuation

McGill Seat Alert | Open-Source Contribution | [GitHub](#)

Aug 2025 – Nov 2025

- Developed a Python automation tool using Selenium to monitor course availability and detect open seats
- Implemented automated notification system using external APIs, configured GitHub Actions to perform checks at regular intervals

LEADERSHIP

McWiCS | Hackathon Director | Sept 2026 – Present — *Planning and directing McWiCS' annual hackathon*
